

Questions/Comments for 4 August Meeting

STAT

personnel have studied the tasks required in this effort and pose the following questions/comments:

1. Is the problem confined to the National level and the Washington Area: If not, how deep and to what level should the problem be researched?
2. What are the requirements of the community?
3. Discuss criteria for improvement. For example, is timeliness a criteria for improvement? Does improvement mean that decision makers require a shorter response time? Should the community holdings be more accessible or more useful?
4. Are there problems in validating data?
5. Would a common user language be an improvement? For example, should geographic place names have a common base? Is this the type improvement desired?
6. An organizational chart should be provided by each agency showing relationship and areas of interest to the problem which will be researched.
7. Each agency should provide a briefing. Where, when, and at what security level?
8. Agencies should identify documents for required reading.
9. Because of the security level, all materials should be sent to NSA.
